

Solar Thermal Energy resists the economic turmoil and celebrates a strong growth

Brussels, 19 June 2009. The Solar Thermal Industry is looking confidently toward the future following a strong performance in 2008, when the European market grew by 60%. And the 4th European Solar Thermal Energy Conference (estec2009) confirmed its status as the largest international solar thermal platform worldwide with around 400 participants from 43 countries.

“In 2008, solar thermal heating and cooling solutions gained favour in more and more countries”, says ESTIF President Olivier Drücke. “The solar thermal market in the EU and Switzerland grew by over 60% to 3,3 GW_{th} of new capacity, i.e. 4,76 mil m² of collector area”. While demand for solar thermal technologies increased strongly in Spain, Italy and France, the biggest push came from the German market which more than doubled, from 0,7 GW_{th} to 1,5 GW_{th}.

Austria is still ahead per-capita in continental Europe. With a total capacity in operation of 273 kW_{th} per 1000 inhabitants, it trails only world leader Cyprus which achieved 623 kW_{th} per 1000 inhabitants at the end of 2008.

At the recent estec2009 conference in Munich an international audience was given a preview of the latest ESTIF statistics. As these figures attest, the solar thermal sector is fast becoming an economic stimulator. Indeed, the European turnover for solar thermal products exceeded the 3 billion Euro mark in 2008 and the industry now employs over 40 000 persons on a full-time basis.

“Solar thermal is well-anchored in today’s European markets – our solutions help consumers reduce their energy bills and society to reduce its dependence on scarce, imported fuels” says Olivier Drücke, ESTIF President. “With oil prices rising again, we believe that our sector will continue to grow steadily and be less affected by the current economic turmoil”.

About ESTIF

The European Solar Thermal Industry Federation represents manufacturers, service providers and national solar associations. With around 100 members from 19 countries, ESTIF stands for more than 95% of the European market for solar thermal products.

ESTIF's mission is to achieve high priority and acceptance for Solar Thermal as a key element for sustainable heating and cooling in Europe and with immediate effect to work for the implementation of all steps necessary to realise the high potential of Solar Thermal.

ESTIF is the main co-ordinator of the European Solar Days and organises every two years the largest international conference dedicated to Solar Thermal worldwide. The 5th European Solar Thermal Energy Conference (estec) will take place again in 2011.

ESTIF is also a founding member of EREC, the European Renewable Energy Council, with whom it shares headquarters in Brussels' Renewable Energy House.
